

Contour Effect scaling issue II

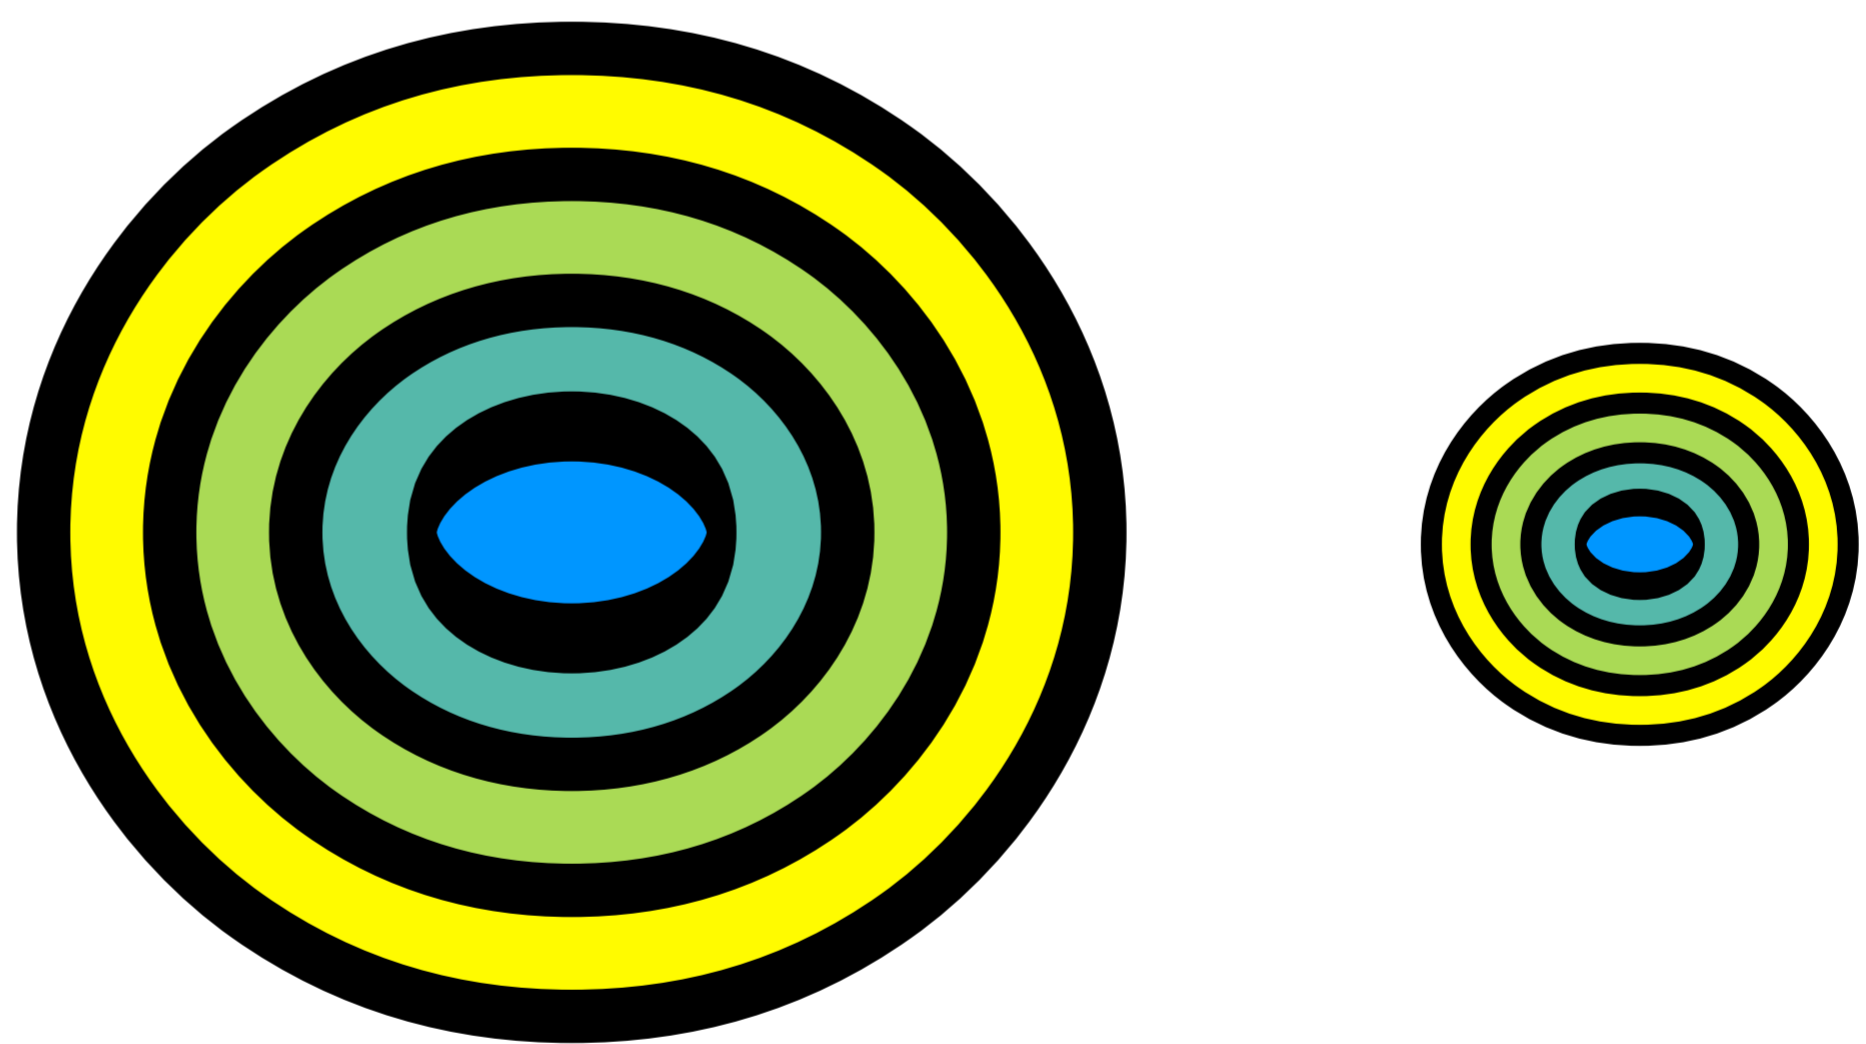

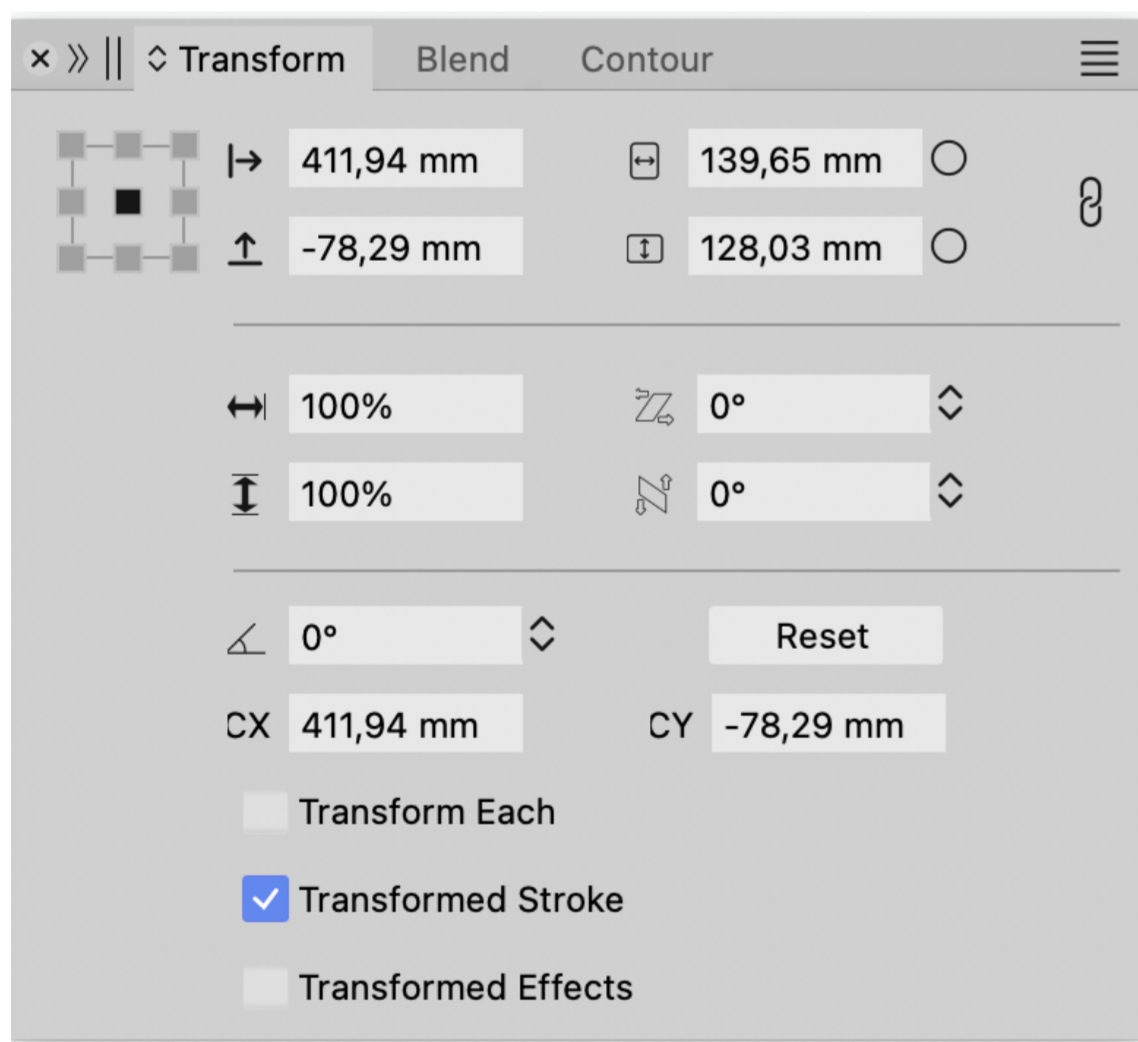

Administrators answer was "The original and the contour are separate objects. Group these two and then scale."

The strange thing is that the objects cannot be selected separately. In addition, it also behaves as 1 object (selecting, cut, copy, paste, dragging around...)

Anyway, suppose this is one thing to remember even though it is not visible or clear through behavior, I will group it.

Then, ticking 'Transformed Stroke' in the transform panel ON That's the setting where scaling the effect works. You might think tick Transformed Effects ON since we are dealing with a contour effect but that does not work.

When ticking Transformed Stroke ON the unclear line change in the original segment remains strange.

Transformed Stroke OFF

Transformed Stroke ON
